

MEYVEDA

Product Roadmap & Future Development

India's First AYUSH Digital Health Ecosystem
Rooted in Shastra · Built for Bharat

"Swasthasya Swasthya Rakshanam, Aturasya Vikara Prashamanam"

Preserve the health of the healthy; cure the disease of the afflicted.

Version 1.0 · June 2026

MeyVeda — Product Roadmap & Future Development Document

Platform Vision: India's first AYUSH Digital Health Ecosystem — built on the classical sciences of Ayurveda, Yoga & Naturopathy, Unani, Siddha, and Homeopathy. Every feature, every screen, every AI response must be rooted in Ayurvedic shastra — not allopathic conventions.

Guiding Principle

MeyVeda is **not** a generic telemedicine app with Ayurvedic branding. It is a purpose-built platform where:

- Diagnosis follows **Ashtavidha Pariksha** (8-fold examination), not ICD codes
 - Prescriptions list **Aushadhi** (herbs, formulations, Anupana, Pathya), not pharma drugs
 - Wellness is tracked through **Prakriti, Agni, Ama, and Ojas**, not BMI charts
 - AI speaks in **Ayurvedic** idiom: doshas, dhatus, srotas, not "symptoms"
 - Time follows **Dinacharya** and **Ritucharya** rhythms, not generic schedules
-

Part 1 — What Is Already Built

Authentication & Identity

Module	Status	Notes
OTP-based login (email)	 Done	Via Supabase Edge Functions
Multi-step onboarding	 Done	Welcome → Phone → OTP → Role → ABHA → Intake
ABHA linking (onboarding)	 Done	ABDM health locker integration
Role-based routing (patient/practitioner/admin)	 Done	Middleware protected
Family member profiles	 Done	Multi-profile under one account

Patient Portal

Module	Status	Notes
Home dashboard	✓ Done	Prakriti, wellness score, Dinacharya, next appointment
Prakriti Assessment (quiz)	✓ Done	7-question Vata/Pitta/Kapha determination
Dinacharya (daily routine tracker)	✓ Done	4 time-blocks, task categories
Practitioner Discovery	✓ Done	Filter by discipline, language, price, availability
Practitioner Profile view	✓ Done	Qualifications, HPR badge, slot picker
Appointment booking	✓ Done	Mode selection, patient selection, payment flow
Appointment management	✓ Done	Upcoming/Past/Cancelled tabs, cancellation, ratings
Video consultation (basic)	✓ Done	WebRTC interface with EMR side-panel
Waiting room	✓ Done	Camera/mic check pre-call
Health Records (Pariksha/Aushadhi/Lab/Trackers)	✓ Done	ABHA/ABDM consent management
Apothecary (medicine ordering)	✓ Done	Ayurvedic form types (Churna, Ghrita, Vati, Arishta)
Checkout & payments	✓ Done	GPay, PhonePe, Card, UPI
Order history & tracking	✓ Done	
Post-consultation feedback	✓ Done	Star ratings, review
AyurSanvaad AI Chat	✓ Done	Context-aware AYUSH wellness companion
Patient-Doctor messaging	✓ Done	Thread-based conversation
Notifications center	✓ Done	Appointments, prescriptions, reminders

Module	Status	Notes
Consent management (ABDM)	✓ Done	Grant/revoke health record access
Patient profile	✓ Done	Personal info, health metrics, Prakriti, ABHA
ABHA profile management	✓ Done	Link/manage ABHA ID
Notification preferences	✓ Done	
Privacy & terms pages	✓ Done	
Help & FAQ	✓ Done	

Practitioner Portal (MeyVeda Pro)

Module	Status	Notes
Pro dashboard	✓ Done	Queue stats, online/offline toggle, live queue
Patient registry	✓ Done	Search, filter, inline vitals/problem/note editing
EMR (Ashtavidha SOAP)	✓ Done	Rogi / Ashtavidha / Vinischaya / Chikitsa tabs
Prescription writer	✓ Done	Herb suggestions, Anupana, frequency, dosage
Prescription history	✓ Done	All prescriptions issued
Availability management	✓ Done	Weekly schedule, slot duration, buffer
Follow-ups management	✓ Done	Due date tracking
Practitioner inbox	✓ Done	Patient messages and notes
Practice analytics	✓ Done	Consultations, revenue, demographics, ratings
Walk-in check-in	✓ Done	Without prior booking

Admin Panel

Module	Status	Notes
Admin dashboard	✅ Done	Platform stats, lists
Practitioner management & verification	✅ Done	
Patient management	✅ Done	
Hospital/clinic management	✅ Done	
Medicine inventory & approval	✅ Done	
Order management	✅ Done	

Part 2 — In-Progress / Needs Completion

These modules exist but have recent uncommitted changes indicating active development:

Module	File	What Needs Completion
AyurSanvaad AI Chat	<code>ai-chat/page.tsx</code>	Wire up real LLM (Claude/Gemini); replace mock responses with Ayurveda-grounded API calls
Apothecary	<code>apothecary/page.tsx</code>	Real medicine catalog from DB; cart persistence; order flow completion
EMR	<code>pro/emr/page.tsx</code>	Save EMR to Supabase; SOAP note persistence; PDF export of Nuskha
Prescription	<code>pro/prescribe/page.tsx</code>	Sign & finalize prescription; link to ABDM; digital signature
Profile	<code>profile/page.tsx</code>	Prakriti score sync from quiz; wellness score calculation
Health Records	<code>records/page.tsx</code>	ABDM consent flow completion; real data binding

Part 3 — Future Modules & Functionalities

Below is the full roadmap of what to build next, grouped by phase.

Phase 2 — Deepening Core Ayurvedic Workflows

2.1 Nadi Pariksha (Pulse Diagnosis) Module

The cornerstone diagnostic tool of Ayurveda. Pulse reading reveals Prakriti, Vikriti, and organ-level imbalances.

Features:

- Guided self-assessment: questionnaire mapped to Nadi types (Vata/Pitta/Kapha nadi)
- Practitioner screen: record pulse findings with structured fields (Gati, Tala, Bala, Kala, Vikruti assessment)
- AI interpretation assistance: pattern-match symptoms to Nadi-based diagnosis
- Link to EMR automatically: populate Ashtavidha Pariksha → Nadi field
- Historical Nadi records over time (track dosha shifts)

Ayurvedic Grounding: Based on Charaka Samhita and Sharngadhara Samhita's Nadi Pariksha chapters.

2.2 Ashtavidha Pariksha (8-Fold Examination) Full Digital Protocol

Currently EMR has tabs but examination fields are partial.

Features:

- Structured digital form for all 8 examination types:

1. **Nadi** (Pulse) — Vata/Pitta/Kapha characteristics 2. **Mutra** (Urine) — Color, quantity, frequency, Taila Bindu Pariksha 3. **Mala** (Stool) — Consistency, color, frequency, Ama indicators 4. **Jihva** (Tongue) — Coating (Sama/Nirama), color, cracks, coating pattern mapped to doshas 5. **Shabda** (Voice/Sound) — Clarity, hoarseness 6. **Sparsa** (Touch) — Skin texture, temperature (Ushna/Sheeta), moisture 7. **Drik** (Eyes) — Conjunctival color, Scleral patterns, dosha indicators 8. **Akriti** (Overall appearance) — Body build (Sthula/Madhyama/Krisha), Bala

- Auto-suggest Vikriti based on completed fields
- Practitioner can add photo/scan attachments
- Saved to patient EMR with timestamp

2.3 Dashavidha Pariksha (10-Fold Patient Examination)

Extended examination protocol for complex cases.

Features:

- Prakriti (constitution), Vikriti (current imbalance), Sara (tissue excellence), Samhanana (physique), Pramana (body measurements), Satmya (adaptability),

Satva (mental strength), Ahara Shakti (digestive capacity), Vyayama Shakti (exercise capacity), Vaya (age-related assessment)

- Each field with structured input + free text
 - Generates a comprehensive patient report
 - Linked to treatment protocol suggestions
-

2.4 Agni & Ama Tracker

The digestive fire (Agni) and toxin accumulation (Ama) are the central disease-causation framework in Ayurveda.

Features:

- Daily Agni self-assessment for patients: appetite level, digestion speed, Ama symptoms (coating, heaviness, lethargy)
 - Visual Agni meter: Sama/Vishama/Tikshna/Manda Agni classification
 - Ama score calculation: weekly trend chart
 - Diet recommendations auto-generated based on Agni type
 - Deepana-Pachana (digestive) herb suggestions when Ama is high
 - Practitioner can set Agni targets for patients post-consultation
-

2.5 Samprapti (Pathogenesis) Mapping

Ayurveda traces disease through 6 stages (Shatkriyakala). This is missing from any digital platform.

Features:

- Practitioner can map patient's disease stage:
1. Sanchaya (accumulation)
 2. Prakopa (aggravation)
 3. Prasara (spread)
 4. Sthana Samshraya (localization)
 5. Vyakti (manifestation)
 6. Bheda (chronicity/complication)
- Visual pathogenesis diagram: shows dosha → dhatu → srotas involvement
 - Treatment focus changes automatically based on stage
 - Historical progression tracking over multiple visits
-

Phase 3 — Panchakarma & Therapeutic Programs

3.1 Panchakarma Booking & Management

The 5 purification therapies are the core of Ayurvedic healing but have zero digital infrastructure.

Features (Patient side):

- Panchakarma discovery: clinic-based Panchakarma centers with treatments offered
- Pre-Panchakarma eligibility check: quiz for Agni, Bala, season appropriateness
- Booking individual or package therapies:

- Vamana (therapeutic emesis) - Virechana (purgation) - Basti (medicated enema — Anuvasana & Niruha) - Nasya (nasal administration) - Raktamokshana (bloodletting via Jalauka/Siravedha)

- Pre-Panchakarma protocol (Purvakarma): Snehana/Swedana schedule with instructions
- Post-Panchakarma protocol (Paschatkarma): Samsarjana Krama (reintroduction diet)
- Progress tracking during therapy course

Features (Practitioner/Clinic side):

- Panchakarma calendar: schedule therapy sessions per patient
- Therapist assignment (separate from consulting physician)
- Dravya (material) tracking: oils, herbs used per session
- Session notes: therapy dose, patient reaction, Agni response
- Kala Bala tracking: therapy adjusted per season (Ritucharya)

3.2 Wellness Programs (Subscription-Based)

Curated Ayurvedic programs as structured journeys.

Programs to build:

- **28-Day Prakriti Balance** — Customized to Vata/Pitta/Kapha with daily protocols
- **Ritucharya Seasonal Detox** — 14-day seasonal transition protocol (6 programs per year)
- **Sthoulya Chikitsa (Weight Management)** — Karshana/Brimhana protocol, not calorie-counting
- **Nidra Chikitsa (Sleep Healing)** — Ayurvedic insomnia protocol (Abhyanga, herbs, Dinacharya)
- **Manasa Swasthya (Mental Wellness)** — Sattvavajaya therapy, Medhya Rasayana
- **Prasava Kala (Maternity)** — Garbhini Paricharya (prenatal) + Sutika Paricharya (postnatal)
- **Rasayana (Rejuvenation)** — Anti-aging protocols based on Charaka's Rasayana Adhyaya

Features:

- Program subscription with daily task unlock
- Push notifications for daily protocols

- Practitioner assigned as program guide
 - Milestone check-ins with practitioner at Day 7, 14, 21
 - Community group per program
-

Phase 4 — Knowledge Systems

4.1 Aushadhi Kosha (Ayurvedic Pharmacopoeia)

A searchable reference database of classical Ayurvedic herbs and formulations.

Features:

- Each herb entry (based on API of India / Saushtava standards):
 - **Sanskrit name** + common names (Hindi, English, regional) - **Rasa** (taste) — Madhura, Amla, Lavana, Katu, Tikta, Kashaya - **Guna** (qualities) — Guru/Laghu, Snigdha/Ruksha, Ushna/Sheeta, etc. - **Virya** (potency) — Ushna or Sheetata - **Vipaka** (post-digestive effect) — Madhura, Katu, Amla - **Karma** (actions) — e.g., Deepaniya, Pachana, Balya, Medhya - **Prabhava** (specific action) — unique unexplained effect - **Dosha action** — which dosha it pacifies/aggravates - **Contraindications** and drug-herb cautions -

Classical references — which Samhita it is cited in

- Classical formulation database: Asava/Arishta, Churna, Vati, Ghrita, Taila, Kwatha, Avaleha
 - Practitioner can browse and add from Kosha to prescriptions
 - Patient can look up herbs they've been prescribed
-

4.2 Pathya-Apathya (Diet Guidance) Engine

Ayurvedic nutrition is not calories — it is Rasa, Guna, and Prakriti compatibility.

Features:

- Patient's Prakriti + current Vikriti + season → generates food recommendations
 - **Pathya (suitable) foods** listed with preparation guidance
 - **Apathya (unsuitable) foods** listed with reason (e.g., "Ushna Guna aggravates Pitta")
 - **Ahara Vidhi** (rules of eating): timing, quantities, combinations (Viruddha Ahara)
 - **Viruddha Ahara (incompatible foods)** checker: input what you ate, get dosha impact
 - Seasonal diet calendar: auto-updated per Ritu (season)
 - Recipe suggestions aligned with Prakriti and Agni type
 - Practitioner can customize and add to patient's Pathya list
-

4.3 Grihya Chikitsa (Home Remedies) Knowledge Base

Authentic classical home remedies — not internet folk medicine.

Features:

- Symptom-based search: e.g., "Jwara (fever)", "Kasa (cough)", "Atisara (diarrhea)"
 - Each remedy linked to classical reference (Charaka, Sushruta, Ashtanga Hridayam)
 - Ingredients from kitchen: Ginger (Shunti), Turmeric (Haridra), Tulsi, Black pepper (Maricha), etc.
 - Safety flags: not suitable for children under 5, pregnancy, etc.
 - Audio/video walkthroughs for preparation
 - Practitioner can recommend specific remedies to patients via messaging
 - "Ask Vaidya" link if home remedy is insufficient
-

Phase 5 — Yoga & Mind-Body Sciences

5.1 Yoga & Pranayama Module

Yoga as Ayurvedic therapy (not fitness yoga).

Features:

- Dosha-specific asana sequences:
 - **Vata-pacifying**: grounding, slow, warming sequences
 - **Pitta-pacifying**: cooling, surrendering, moon-salutation based
 - **Kapha-pacifying**: stimulating, energizing, dynamic
 - Pranayama protocols:
 - **Nadi Shodhana** (alternate nostril) — for Vata
 - **Sheetali/Sheetkari** — for Pitta
 - **Bhastrika/Kapalabhati** — for Kapha
 - Guided sessions: video + audio, time-based (10/20/30 min)
 - Yoga Nidra for Nidra Chikitsa (sleep therapy)
 - Dhyana (meditation) tracks by dosha and seasonal need
 - Practitioner can prescribe specific sequences to patients
 - Daily progress tracking: minutes practiced, streak
-

5.2 Sattvavajaya Chikitsa (Mind/Mental Wellness)

Ayurvedic psychology — not CBT, not Western psychiatry.

Features:

- **Manas Prakriti** (mental constitution) assessment: Sattva/Rajas/Tamas proportion
- **Manasa Vikriti** tracker: emotional patterns, stress response, sleep quality

- **Medhya Rasayana** (brain tonic) herb recommendations per mental state
 - **Acharya Rasayana** (ethical conduct therapy): behavioral protocol suggestions
 - Satvavajaya counselors: practitioners specializing in Ayurvedic psychology
 - Daily Sattva journal: gratitude, mantra, intention-setting
 - Integration with Dinacharya: morning meditation, evening reflection tasks
 - Crisis protocol: if severe distress detected, show referral to clinical psychologist
-

Phase 6 — Specialized Branches (Ashtanga Ayurveda)

6.1 Kaumarbhritya (Bala Roga — Pediatric Care)

Ayurvedic child health — from Garbha (prenatal) to Bala (childhood).

Features:

- Child profile linked to parent account
 - **Suvarna Prashan** tracking: immunoenhancement protocol with dates
 - **Lehana** (licking preparations) schedule for infants
 - **Balya Dravya** formulations suitable by age
 - Developmental milestones in Ayurvedic terms (Balya, Kumara stages)
 - Childhood disease protocols: Kasa-Shwasa, Jvara, Atisara, Krimi (worms)
 - Find Kaumarbhritya specialists on the discovery page
 - Vaccination tracker (integration with CoWIN data)
-

6.2 Stri Roga & Prasuti Tantra (Women's Health)

Ayurvedic gynecology and obstetrics.

Features:

- **Artava Chakra** (menstrual cycle) tracker in Ayurvedic terms: Vata-Pitta-Kapha phase mapping across cycle
- **Rutukala** (fertile phase) guidance per Prakriti
- **Garbhini Paricharya** (prenatal care): month-by-month Ayurvedic protocols
 - Dietary Pathya per trimester - Garbha Sanskar guidance - Herb safety database (safe/unsafe in pregnancy)
- **Sutika Paricharya** (postpartum care): 45-day recovery protocol
 - Abhyanga schedule, dietary recommendations - Breastfeeding-supportive herbs (Shatavari, Vidarikanda)
- **Rajonivritti** (menopause) management: Pitta-pacifying protocols, Rasayana
- Find Stri Roga specialists

6.3 Rasayana Chikitsa (Rejuvenation / Anti-Aging)

The 8th branch of Ayurveda — often neglected digitally.

Features:

- **Vaya (Age) Assessment:** biological vs chronological age in Ayurvedic terms
 - **Rasayana Protocol Builder:** based on Kuti Praveshika (indoor) or Vatatapika (outdoor) type
 - **Classical Rasayana recipes:** Chyavanaprasha, Brahma Rasayana, Ashwagandha Ghrita with personalization
 - **Ojas score:** composite score of immunity, vitality, and mental clarity
 - **Monitoring:** track Bala, Varna (complexion), Medha (intellect), Indriya Patu (sensory acuity) over time
 - Find Rasayana specialists and certified Panchakarma centers
-

6.4 Shalya Tantra & Ksharasutra (Surgical Branch)

For practitioners who perform Ayurvedic surgical and para-surgical procedures.

Features:

- Ksharasutra procedure scheduling and tracking
 - Agnikarma session records
 - Jalaukavacharana (leech therapy) session notes
 - Pre/post-procedure Pathya instructions for patients
 - Complication tracking
 - Specialist discovery filter: "Shalya Tantra" as discipline sub-type
-

Phase 7 — Integrations & Compliance

7.1 ABDM Full Integration

Current state is partial. Complete the NHA-mandated ABDM ecosystem.

Features:

- **ABHA creation** from app (not just linking)
- **Health Record sharing** via ABDM consent artefacts: send records to other ABDM-linked facilities
- **PHR App compliance:** MeyVeda as a certified PHR app
- **Facility Registry:** link registered AYUSH clinics to HFR (Health Facility Registry)
- **HPR verification:** real-time HPR ID verification for practitioners
- **Ayushman Bharat PM-JAY:** check eligibility and initiate AYUSH claims

- **CGHS/ECHS integration:** AYUSH reimbursement claim generation
-

7.2 AYUSH Insurance & Claims

Currently no digital infrastructure for AYUSH insurance.

Features:

- Estimate generator: Ayurvedic procedure cost estimate for insurance pre-auth
 - Claim submission: structured claim form for CGHS, ESI, private insurers
 - Diagnosis code mapping: WHO ICTM (International Classification of Traditional Medicine) codes
 - Treatment package pricing (standardized rates for Panchakarma packages)
 - Claim status tracking
-

7.3 Lab & Diagnostics Integration

Bridge between modern diagnostics and Ayurvedic interpretation.

Features:

- Order lab tests from AYUSH perspective:
 - **Standard tests:** CBC, LFT, KFT, Thyroid (with Ayurvedic Dosha interpretation overlay)
 - **Specialized AYUSH tests:** Ama-specific markers, Ojas markers (being developed by research institutions)
 - Lab result upload and Supabase storage (ABDM-linked)
 - **Dosha interpretation layer:** AI reads reports and explains in Ayurvedic terms ("elevated WBC may indicate Pitta aggravation and Ama formation")
 - Integration with Thyrocare, Redcliffe Labs API for home sample collection
 - Results auto-linked to Health Records and can be shared with practitioner
-

7.4 Ayurvedic Pharmacy Integration

Move beyond the current basic Apothecary.

Features:

- Integration with licensed Ayurvedic pharmacies: Dabur, Himalaya, Baidyanath, Kottakkal, Vaidyaratnam
- **GMP-certified product filter:** only pharmacopoeia-compliant products
- **Prescription-based ordering:** practitioner's signed Nuskha required for classical formulations
- **Kalpana filter:** browse by formulation type (Asava, Arishta, Churna, Vati, Ghrita, Taila, Avaleha, Kwatha, Lepa)

- Raw herb marketplace: quality-tested raw herbs for home use
 - **Batch tracking:** track herb source, processing facility, test certificates
 - Auto-reorder reminders based on prescription duration
-

Phase 8 — AI & Intelligence Layer

8.1 AyurSanvaad 2.0 (Upgraded AI Chat)

Transform the current mock chat into a genuine Ayurvedic AI assistant.

Features:

- Powered by Claude API (Anthropic) with Ayurvedic knowledge base
 - **Prakriti-aware responses:** all suggestions personalized to patient's dosha
 - **Seasonal context:** responses automatically adjusted for current Ritu
 - **Symptom analysis:** maps symptoms to dosha imbalances, suggests home remedies or consultation
 - **Herb interaction checker:** "Is it safe to take Ashwagandha with my current medications?"
 - **Diet Q&A:** "Can I eat curd at night?" → classical Ayurvedic answer with reasoning
 - **Conversation memory:** AI remembers previous sessions within 90 days
 - **Voice input:** Speak symptoms in Hindi/English
 - **Multilingual:** Hindi, Tamil, Telugu, Kannada, Malayalam support
 - **Escalation logic:** if symptoms suggest acute illness, redirect to emergency or suggest in-person consultation
-

8.2 AI-Assisted EMR (Vaidya Sahayak)

AI co-pilot for practitioners during consultations.

Features:

- **Symptom-to-Nidana:** practitioner types symptoms, AI suggests probable Nidana (causative factors) and Samprapti
- **Herb suggestion engine:** given Vikriti, season, and patient Prakriti → suggest classical formulations from Kosha
- **Anupana intelligence:** auto-suggest Anupana (vehicle) based on herb and target srotas
- **Drug duplication check:** flag if two prescribed herbs have opposing Virya
- **Dosha-Drug mismatch alert:** warn if prescribed herb aggravates patient's aggravated dosha
- **Template library:** save and reuse SOAP note templates for common conditions (Jwara, Kasa, Ama-vata, Prameha)

- **Dictation mode:** practitioner speaks notes, AI transcribes and structures into SOAP format
 - **Auto-populate Ashtavidha:** if vitals entered, pre-fill relevant Pariksha fields
-

8.3 Swasthya Score Engine

A composite, Ayurveda-native wellness scoring system (replacing the current placeholder).

Components:

- **Agni Score** (digestive health) — 25%
- **Nidra Score** (sleep quality) — 20%
- **Manas Score** (mental wellness) — 20%
- **Vyayama Score** (physical activity per Bala) — 15%
- **Sattva Score** (lifestyle alignment with Prakriti) — 10%
- **Dinacharya Adherence Score** — 10%

Features:

- Daily inputs via 3-question micro-check-in (2 minutes)
 - Weekly trend graph with dosha interpretation
 - Actionable nudges when score drops ("Your Agni seems low — try warm water with ginger before meals")
 - Practitioner can view patient's Swasthya Score history before consultation
-

Phase 9 — Community & Education

9.1 Satsang (Community Forums)

Practitioner-moderated wellness communities.

Features:

- Topic-based communities: Prakriti types, specific conditions (Prameha, Sandhi-Vata, PCOS), Panchakarma experience
 - Practitioner as community guide (verified badge)
 - Q&A format: patients post questions, practitioners answer
 - Success stories: verified patient case studies with practitioner consent
 - Weekly live sessions (AMA — Ask the Vaidya)
 - Content moderation: no allopathic drug promotion, no harmful advice
-

9.2 Vaidya Learning Portal (CME for Practitioners)

Continuing Medical Education for AYUSH practitioners.

Features:

- Case-based learning: anonymized real cases with expert commentary
 - Classical text study groups: chapter-by-chapter study of Charaka/Sushruta/Ashtanga
 - Workshop marketplace: book in-person or virtual workshops (Panchakarma techniques, Nadi Pariksha, Ksharasutra)
 - CME credit tracking (aligned with CCIM requirements)
 - Certification courses: specialty certificates in Panchakarma, Rasayana, Kaumarbhritya
 - Research paper repository: curated peer-reviewed AYUSH research
-

Phase 10 — Scale & Infrastructure

10.1 AYUSH Hospital & Clinic Network

Expand beyond individual practitioners.

Features:

- Multi-practitioner clinic profiles (like Apollo but for AYUSH)
 - Clinic-level availability management
 - In-patient (IPD) admission management for Panchakarma hospitals
 - Ward management: room allocation, daily therapy schedule per admitted patient
 - Pharmacy attached to hospital (dispensing module)
 - Hospital analytics: occupancy, revenue per therapy, patient outcomes
-

10.2 Multi-Language Support

Critical for rural and tier-2/3 city reach.

Languages:

- Hindi (national reach)
- Tamil (Tamil Nadu + Sri Lanka)
- Telugu (Andhra + Telangana)
- Kannada (Karnataka — Kottakkal, Manipal)
- Malayalam (Kerala — heartland of Ayurveda)
- Bengali, Marathi, Gujarati (regional scale)

Features:

- UI translation via i18n framework
 - AI chat in regional languages
 - Herb names in regional languages in Kosha
 - SMS/WhatsApp notifications in patient's preferred language
-

10.3 WhatsApp & Push Notification Enhancement

Current: Email/in-app only.

Features:

- WhatsApp Business API integration:
 - Appointment reminders with one-tap confirm/reschedule
 - Prescription delivery as PDF on WhatsApp
 - Daily Dinacharya reminders
 - Herb refill reminders
 - Firebase Push Notifications (web + mobile PWA)
 - SMS fallback for patients without smartphones
-

10.4 Progressive Web App (PWA)

Make MeyVeda installable as a mobile app without App Store dependency.

Features:

- Service Worker: offline access to Dinacharya tasks and Health Records (cached)
 - Push notifications via Web Push API
 - Home screen install prompt
 - App shell architecture: instant load
 - Biometric login (WebAuthn) for repeat users
-

10.5 Telemedicine Enhancement

Current video is basic WebRTC. Upgrade to production-grade.

Features:

- Replace DIY WebRTC with Daily.co or LiveKit SDK
 - Recording support (with patient consent): stored encrypted in ABDM-linked storage
 - Screen sharing: practitioner can show diagnostic images
 - Virtual Pariksha tools: digital tongue assessment, facial analysis (camera-based dosha hints)
 - Group session support: family consultation
 - Bandwidth-adaptive streaming for low-connectivity areas
-

Part 4 — Technical Debt & Infrastructure Work

Item	Priority	Description
Supabase schema documentation	High	<code>database.types.ts</code> is minimal; generate full types from schema
Real AI integration for AyurSanvaad	High	Replace mock responses with Claude API calls
EMR data persistence	High	Save all SOAP note fields to Supabase
Prescription PDF export	High	Digital Nuskha as downloadable/shareable PDF
Payment gateway integration	High	Replace mock payment with Razorpay/PhonePe SDK
Error boundaries & loading states	Medium	Many pages lack proper loading/error UI
Realtime subscriptions	Medium	Supabase Realtime for queue, messages, notifications
Image uploads	Medium	Practitioner avatars, clinical photos, prescription scans
Rate limiting on API routes	Medium	<code>/api/slots</code> and future routes need protection
E2E testing	Medium	Cypress/Playwright test suite for critical patient flows
Mobile PWA	Medium	See Phase 10.4
Analytics & observability	Low	PostHog or Mixpanel for product analytics
Accessibility (a11y)	Low	WCAG 2.1 AA compliance for government health platform standards

Part 5 — Design Language Corrections (Ayurvedic Context)

Throughout the app, replace allopathic language with authentic Ayurvedic terms:

Replace (Allopathic)	With (Ayurvedic)	Context
"Doctor"	"Vaidya"	Practitioner reference throughout app
"Patient"	"Rogi"	In clinical contexts; "patient" is OK in casual UI
"Diagnosis"	"Nidana / Vinischaya"	EMR and records
"Prescription"	"Nuskha / Chikitsa Sutra"	Prescription pages
"Medicine"	"Aushadhi"	Throughout apothecary
"Pharmacy"	"Apothecary / Aushadhalaaya"	Already partially done
"Symptoms"	"Lakshana / Rupa"	Discovery and EMR
"Disease"	"Vyadhi / Roga"	Records and EMR
"Treatment"	"Chikitsa"	EMR and care plan
"Appointment"	"Pariksha Samay" (examination time)	Optional, preserve "appointment" in casual contexts
"Consultation"	"Pariksha / Mantrana"	Video and booking pages
"Health score"	"Swasthya Mana"	Dashboard
"Daily routine"	"Dinacharya"	Already done 
"Body type"	"Prakriti"	Already done 
"Detox"	"Shodhana / Panchakarma"	Programs and wellness content
"Anti-aging"	"Rasayana"	Rejuvenation modules
"Mental health"	"Manas Swasthya / Sattvavajaya"	Mental wellness module

Summary — Development Priority Order

Priority	Module	Impact	Effort
1	AI Chat (real Claude integration)	Very High	Medium
2	EMR data persistence + PDF Nuskha	Very High	Medium
3	Prescription signing & ABDM linking	Very High	High
4	Aushadhi Kosha (herb database)	High	High
5	Panchakarma booking module	High	High
6	Swasthya Score engine (real calculation)	High	Medium
7	Agni & Ama tracker	High	Low
8	Pathya-Apathya diet engine	High	Medium
9	Nadi Pariksha module	High	High
10	Yoga & Pranayama module	Medium	High
11	Payment gateway (Razorpay)	High	Medium
12	WhatsApp notifications	Medium	Medium
13	PWA / offline support	Medium	Medium
14	Multi-language (Hindi first)	Medium	High
15	Sattvavajaya / Mental wellness	Medium	High
16	Stri Roga module	Medium	High
17	Kaumarbhritya module	Medium	High
18	AYUSH Insurance / Claims	Low	Very High
19	Hospital network / IPD	Low	Very High
20	Vaidya Learning Portal	Low	High

Document Version: 1.0 — June 2026 MeyVeda — Rooted in Shastra, Built for Bharat
